In the Claims:

Please amend the claims as follows:

1. (Currently Amended) A vector system for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid based on adenovirus serotype, the vector system comprising:

- (a) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus inverted terminal repeats (ITRs);
 - (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
 - (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;
- (b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
- (ii) a second adenovirus serotype-specific cis-acting packaging sequence,
 wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa trans-acting
 protein specific for the second cis-acting packing sequence; and
- (c) an adenovirus 52/55 kDa trans-acting protein that supports packaging of the first adenovirus nucleic acid sequence and fails to support packaging of the second adenovirus nucleic acid sequence,

- 2. (Previously Amended) The vector system of claim 1, wherein the adenovirus capsid, packaging and 52/55 kDa protein encoding sequences are human adenovirus sequences.
- 3. (Previously Amended) The vector system of claim 1, wherein the first and second adenovirus serotype-specific cis-acting packaging sequences are selected from the group consisting of adenovirus type 2 (Ad2), adenovirus type 5 (Ad5), adenovirus type 7 (Ad7), adenovirus type 12 (Ad12), adenovirus type 17 (Ad17), and adenovirus type 40 (Ad40) packaging sequences.

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 3

4. (Previously Amended) The vector system of claim 3, wherein the first adenovirus serotype-specific cis-acting packaging sequence is from adenovirus type 5 and the second adenovirus serotype-specific cis-acting packaging sequence is from adenovirus type 7.

- 5. (Previously Amended) The vector system of claim 3, wherein the first adenovirus serotype-specific cis-acting packaging sequence is from adenovirus type 7 and the second adenovirus serotype-specific cis-acting packaging sequence is from adenovirus type 5.
- 6. (Previously Amended) The vector system of claim 1, wherein the first adenovirus nucleic acid sequence fails to produce a complete adenovirus capsid.
- 7. (Previously Amended) The vector system of claim 6, wherein the first adenovirus sequence is encapsidated in a capsid comprising at least one polypeptide encoded by the second adenovirus sequence.
- 8. (Previously Amended) The vector system of claim 6, wherein the first adenovirus sequence is packaged in a capsid encoded by the second adenovirus sequence.
- 9. (Previously Amended) The vector system of claim 42, wherein the replication defective adenovirus comprises a defective or modified adenovirus E1 gene, E2A gene, E2B gene, E3 gene, E4 gene, E4 promoter, penton gene, fiber gene, hexon gene or combination thereof.
- 10. (Original) The vector system of claim 1, wherein the failure to produce a functional 52/55 kDa trans-acting protein is due to a mutation in the sequence encoding the protein.
- 11. (Original) The vector system of claim 10, wherein the mutation is a missense mutation, a point mutation, a frameshift mutation or a deletion mutation.

12. (Canceled)

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 4

13. (Currently Amended) The vector system of claim 1, wherein the <u>adenovirus</u> 52/55 kDa trans-acting protein that supports packaging of the [helper-dependent] <u>first</u> adenovirus nucleic acid sequence is encoded by a nucleic acid sequence functionally-associated with the genome of an adenovirus replication competent host cell.

Attorney's Docket No.: 11203-002001 / UM 1750

14. (Original) The vector system of claim 13, wherein adenovirus replication competent host cell is a 293 cell line.

15-16. (Canceled)

- 17. (Currently Amended) A vector system for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid based on adenovirus serotype, the vector system comprising:
- (a) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
 - (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
 - (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;
- (b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
 - (ii) a second adenovirus serotype-specific cis-acting packaging sequence; and
- (iii) a nucleic acid sequence encoding an adenovirus 52/55 kDa trans-acting protein that supports packaging of the first adenovirus nucleic acid sequence and fails to support packaging of the second adenovirus nucleic acid sequence,

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 5

18. (Previously Amended) A vector system for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid based on adenovirus serotype, the vector system comprising:

- (a) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
 - (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
 - (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;
- b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
- (ii) a second adenovirus serotype-specific cis-acting packaging sequence,
 wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa protein specific
 for the second cis-acting packing sequence; and
- (c) a cell comprising a nucleic acid sequence encoding adenovirus serotype 52/55 kDa transacting protein specific for the first cis-acting packing sequence,

wherein the replication defective adenovirus comprises a defective or modified adenovirus E1 gene, E2A gene, E2B gene, E3 gene, E4 gene, E4 promoter, penton gene, fiber gene, hexon gene, or a combination thereof.

19. (Currently Amended) A vector system for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid based on adenovirus serotype, the vector system comprising:

- (i) 5' and 3' adenovirus ITRs;
- (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
- (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;
- (b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
 - (ii) a second adenovirus serotype-specific cis-acting packaging sequence,

wherein the [helper] <u>first</u> adenovirus nucleic acid fails to encode a polypeptide having the activity of the [helper] <u>first</u> adenovirus serotype 52/55 kDa trans-acting protein; and

Serial No. : 09/488,867 Filed : January 21, 2000

Page: 6

(c) an expression cassette comprising a nucleic acid sequence encoding adenovirus serotype 52/55 kDa trans-acting protein specific for a first adenovirus serotype-specific cis-acting packaging sequence,

Attorney's Docket No.: 11203-002001 / UM 1750

wherein the replication defective adenovirus comprises a defective or modified adenovirus E1 gene, E2A gene, E2B gene, E3 gene, E4 gene, E4 promoter, penton gene, fiber gene, hexon gene, or a combination thereof.

- 20. (Previously Amended) A vector comprising a replication defective adenovirus sequence comprising:
- (a) a first adenovirus serotype-specific cis-acting packaging sequence; and
- (b) a nucleic acid sequence encoding a functional second adenovirus serotype-specific 52/55 kDa protein, wherein said protein is not specific for the first adenovirus serotype-specific cisacting packaging sequence,

- 21. (Original) The vector of claim 20, further comprising at least one adenoviral nucleic acid sequence needed to produce an adenoviral capsid.
- 22. (Original) The vector of claim 21, further comprising sufficient adenoviral nucleic acid sequence to produce a complete adenoviral capsid when the vector is expressed in an adenovirus replication-competent host cell.
- 23. (Previously Amended) The vector of claim 20, wherein the first adenovirus serotype-specific cis-acting packaging sequence and second adenovirus serotype-specific a nucleic acid sequence are selected from the group consisting of adenovirus type 2 (Ad2), adenovirus type 5 (Ad5), adenovirus type 7 (Ad7), adenovirus type 12 (Ad12), adenovirus type 17 (Ad17), and adenovirus type 40 (Ad40).

Serial No.: 09/488,867 Filed: January 21, 2000

Page : '

24. (Previously Amended) The vector of claim 23, wherein the first adenovirus serotype sequence is adenovirus type 5 and the second adenovirus serotype sequence is adenovirus type 7.

Attorney's Docket No.: 11203-002001 / UM 1750

- 25. (Previously Amended) The vector of claim 23, wherein the first adenovirus serotype sequence is adenovirus type 7 and the second adenovirus serotype sequence is adenovirus type 5.
- 26. (Previously Amended) A transformed or isolated infected cell comprising the vector system of claim 1, claim 17, claim 18, claim 19 or the vector of claim 20.

27. (Currently Amended) A kit useful for making adenovirus encapsidated replication defective nucleic acid sequences, the kit comprising [carrier means being compartmentalized to receive in close confinement therein] one or more containers comprising a vector system of claim 1, claim 17, claim 18 or claim 19.

28-30. (Canceled)

- 31. (Currently Amended) A method of producing a replication defective encapsidated adenovirus vector, comprising the following steps:
- (a) transforming or infecting into adenovirus replication competent host cells
 - (i) a first adenovirus nucleic acid sequence comprising:

5' and 3' adenovirus inverted terminal repeats (ITRs);

- a first adenovirus serotype-specific cis-acting packaging sequence; and
- a heterologous gene operably linked to a transcriptional control sequence;
- (ii) a second adenovirus nucleic acid sequence comprising:
 - 5' and 3' adenovirus ITRs;
 - a second adenovirus serotype-specific cis-acting packaging sequence,

wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa protein

specific for the second adenovirus serotype-specific cis-acting packaging sequence; and

(iii) a nucleic acid sequence encoding an adenovirus 52/55 kDa protein specific for a first adenovirus serotype-specific cis-acting packaging sequence; and

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 8

(b) culturing the cells under conditions where the first replication defective adenovirus sequence is encapsidated to produce a replication defective adenovirus vector,

wherein the replication defective adenovirus comprises a defective or modified adenovirus E1 gene, E2A gene, E2B gene, E3 gene, E4 gene, E4 promoter, penton gene, fiber gene, hexon gene, or a combination thereof.

- 32. (Currently Amended) A method of producing a replication defective encapsidated adenovirus vector, comprising the following steps:
- (a) transforming or infecting into an adenovirus replication competent host cell a first and second adenovirus replication defective sequences, wherein the cell comprises a nucleic acid sequence encoding an adenovirus 52/55 kDa trans-acting protein that supports packaging of a first adenovirus nucleic acid sequence and fails to support packaging of a second adenovirus nucleic acid sequence, and wherein
 - (i) the first adenovirus nucleic acid sequence comprises:
 - 5' and 3' adenovirus inverted terminal repeats (ITRs);
 - a first adenovirus serotype-specific cis-acting packaging sequence; and
 - a heterologous gene operably linked to a transcriptional control sequence;
 - (ii) the second adenovirus nucleic acid sequence comprises:
 - 5' and 3' adenovirus ITRs;
 - a second adenovirus serotype-specific cis-acting packaging sequence,

wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa transacting protein specific for the second adenovirus serotype-specific cis-acting packaging

sequence; and

(b) culturing the cells under conditions where the first replication defective adenovirus sequence is encapsidated to produce a replication defective adenovirus vector,

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 9

33. (Currently Amended) A method of producing a replication defective encapsidated adenovirus vector, comprising the following steps:

(a) transforming or infecting a first and second adenovirus replication defective sequences into an adenovirus replication competent host cell, wherein

(i) the first adenovirus nucleic acid sequence comprises:

5' and 3' adenovirus inverted terminal repeats (ITRs);

a first adenovirus serotype-specific cis-acting packaging sequence;

a heterologous gene operably linked to a transcriptional control sequence; and

a nucleic acid sequence encoding an adenovirus 52/55 kDa protein specific for the

first adenovirus serotype-specific cis-acting packaging sequence; and

(ii) the second adenovirus nucleic acid sequence comprises:

5' and 3' adenovirus ITRs;

a second adenovirus serotype-specific cis-acting packaging sequence,

wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa trans-

acting protein specific for the second adenovirus serotype-specific cis-acting packaging sequence; and

(b) culturing the cells under conditions where the first replication defective adenovirus sequence is encapsidated to produce a replication defective adenovirus vector,

- 34. (Previously Amended) The method of claim 31, 32, or 33 wherein the second adenovirus sequence further comprises an adenoviral nucleic acid sequence encoding a complete adenoviral viral capsid.
- 35. (Previously Amended) A vector for selectively packaging replication defective nucleic acid sequences in adenovirus capsids, the vector comprising:
- (a) a replication defective adenovirus sequence comprising an adenovirus serotype 7 (Ad7) cis-acting packaging sequence;

Serial No.: 09/488,867 Filed: January 21, 2000

Page : 10

(b) a nucleic acid sequence encoding an adenovirus serotype 5 (Ad5) 52/55 kDa protein; and

Attorney's Docket No.: 11203-002001 / UM 1750

(c) an adenoviral nucleic acid sequence that encodes a viral capsid and fails to encode or produce an adenovirus 7 serotype 52/55 kDa trans-acting protein.

36-39. (Canceled)

40. (Currently Amended) A packaging cell line for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid, the cell line comprising:

- (a) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus inverted terminal repeats (ITRs);
 - (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
 - (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;
- (b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus ITRs;
- (ii) a second adenovirus serotype-specific cis-acting packaging sequence, wherein the second adenovirus nucleic acid fails to encode a 52/55 kDa trans-acting protein specific for the second adenovirus serotype-specific cis-acting packaging sequence; and
- (c) an adenovirus 52/55 kDa trans-acting protein specific for the first adenovirus serotype-specific cis-acting packaging sequence,

- 41. (Currently Amended) A packaging cell line for selectively packaging a replication defective adenovirus nucleic acid sequence in an adenovirus capsid, the cell line comprising:
- (a) a nucleic acid sequence encoding an adenovirus serotype-specific 52/55 kDa trans-acting protein;
- (b) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' adenovirus inverted terminal repeats (ITRs);

Serial No.: 09/488,867 Filed: January 21, 2000

Page: 11

(ii) a first adenovirus serotype-specific cis-acting packaging sequence; and

(iii) a heterologous nucleic acid operably linked to a transcriptional control sequence;

(c) a second adenovirus nucleic acid sequence comprising:

(i) 5' and 3' adenovirus ITRs;

(ii) a second adenovirus serotype-specific cis-acting packaging sequence that fails to support the activity of the <u>adenovirus</u> serotype-specific 52/55 kDa trans-acting protein,

- 42. (Currently Amended) A vector system for selectively packaging a replication defective nucleic acid sequence in an adenovirus capsid, the vector system comprising:
- (a) a first adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' viral inverted terminal repeats (ITRs);
 - (ii) a first adenovirus serotype-specific cis-acting packaging sequence; and
- (iii) a heterologous nucleic acid operably linked to a transcriptional control sequence, wherein the first adenovirus nucleic acid fails to produce a 52/55 kDa trans-acting protein specific for the first adenovirus serotype-specific cis-acting packaging sequence;
- (b) a second adenovirus nucleic acid sequence comprising:
 - (i) 5' and 3' virus ITRs;
- (ii) a second adenovirus serotype-specific cis-acting packaging sequence, wherein the second adenovirus nucleic acid fails to produce a 52/55 kDa trans-acting protein specific for the second adenovirus serotype-specific cis-acting packaging sequence; and
- (c) a nucleic acid encoding an adenovirus serotype-specific 52/55 kDa trans-acting protein that supports packaging of the first adenovirus serotype-specific cis-acting packaging sequence and fails to support packaging of the second adenovirus serotype-specific cis-acting packaging sequence.
